

Newton Kit

Patenta Contest

3D animation and design for the “NEWTON KIT”

Goal: Design an affordable microcontroller-based science kit for underserved schools on the Peruvian highlands

NEWTON KIT

2020-11-23

SUMMARY

A device that is used to carry out experiments for a school physics course with the great difference that it will be done digitally, making science more attractive to students. It is capable of measuring SPEED, ACCELERATION, DISTANCE, among others; using sensors, motors and a microcontroller that sends the information to the computer via USB cable.

TECHNICAL PROFILE

COMMERCIAL PROFILE

Presentation of the “Newton KIT” in the “Virtual Expo Patenta 2020” peruvian largest invention fair
